

PROJECT LIFESAVER

“Bring loved ones home.”

Project Lifesaver is a transmitting bracelet worn by individuals that helps provide rapid response to save lives and reduce potential for serious injury for adults and children who wander due to Alzheimer's, Autism, Down syndrome, dementia and other related cognitive conditions. Project Lifesaver provides equipment, training, certification and support to law enforcement, public safety organizations and community groups throughout the country and nation. Project Lifesaver has over 1,500 participating agencies across the U.S., Canada, and Australia, and has performed 3,185 searches in the last 17 years with no serious injuries or fatalities ever reported.

Project Lifesaver International provides in-depth training for law enforcement and other public safety agencies on the use of specialized electronic search and rescue equipment, technology and procedures, as well as teaching rescuers how to communicate with people afflicted with cognitive conditions, all of which are essential to the successful rescue of missing persons who wander or otherwise become lost. They certify search and rescue personnel and provide ongoing management to participating agencies.

In addition, Project Lifesaver develops public outreach programs to educate others about the issue of wandering, and they constantly work toward developing public policy and effective law enforcement response to help save lives and “bring loved ones home.”

SOS Health Care, Inc. and Horry County Public Safety are working together to insure that no one ever has to pay for the safety of a loved one! If you are interested in a Project Lifesaver contact:
